Subject: SOP EVO - Computerized System for Supplies Quality Management

Dear Supplier,

I want to remind you that an Information Technology project about communications by CNH Industrial Plants concerning the quality status of their supplier base has been implemented through an Informative System known as SOP EVO (Supply Quality Performance), that will be operative in the CNH Industrial Kutno (Poland) Plant.

As per communication sent to most of the supply base on September 27th, 2016, all communications related to non-conformity management, will be transmitted through this system. SQP EVO requires your reply for each non-conformity, in terms of containment, temporary solutions and final corrective actions. SQP EVO will also require the proper forms and define the timing for each corrective action

In order to show you the SQP EVO System functionalities, we are proud to send you the relevant manual and the CNH Industrial Procedure QPS_08018/I, on which the system is fully based. You will be able to access the system through the Supplier Portal (<https://supplier.cnhind.com>)

In case you should require any clarification about the usage of the system and the related processes you can send your question to lucia.franco@cnhind.com

Best regards,

Davide Verona
Head of Purchasing EMEA
CNH Industrial

Francesco Ricci
Head of Supplier Quality
CNH Industrial
